

## **BRS Save #106**

Charles Handley was flying his Quicksilver MX, one of the most trusted ultralights in the world. Caught in a mountain rotor wind, he fought to recover. As he pushed hard on the pedal, the rudder cable failed.

“Flying near Hillsboro, Ore., I got caught in a rotor. The plane just wasn’t responding. When the cable broke, I deployed. After the canopy opened, it felt like I was rising in a thermal. I landed on a barn roof but was uninjured. If I’d missed the roof, the plane wouldn’t have been damaged much.”

**Result: Pilot Survived!**
